Managed Farmland Service

Mother Service

End-to-end transformation of barren / degraded land into a profitable, biodiverse natural farm.

Individuals / NRIs / Family Foundations
20+ acres

Corporates & PSUs
barren / degraded land, 100+ acres,
ESG mandate

FPOs / Village-level Organisations
aggregated member farms

Small Landholders
5–20 acres

Small & Marginal Holders
< 5 acres

Managed Farmland Service

Client profile P1 · Individuals / NRIs / Family Foundations (20+ acres)

P1 / 5

“End-to-end transformation of barren / degraded land into a profitable, biodiverse natural farm — S1 to S5 under one accountable contract.”

FIELD 01

Purpose & value proposition

The Managed Farmland Service is Gratitude Farms' flagship, integrated offering. It bundles Soil Fertility (S1), Farmland Design (S2), Farmland Operate (S3), the Agri-Operations Centre (S4) and Market Linkage (S5) into a single, end-to-end engagement with one point of accountability. The client hands over a landholding and receives back a designed, living, operating and monetised natural farm.

FIELD 02

Target profile & eligibility

Individual, NRI or family-foundation owners with a landholding of 20 acres or more, seeking a managed, high-value natural farm and a multi-generational legacy / wellness asset.

FIELD 03

Objectives (this profile)

Wealth preservation and a living legacy asset; a productive natural farm and personal wellness retreat; transparent per-plot reporting; an optional cultural/spiritual layer (Nakshatra Vanam).

FIELD 04

Scope (included / excluded)

Included: full S1–S5 — soil restoration, custom design, development, operation, AOC reporting and market linkage.

Excluded: purchase of land; statutory approvals (we assist); guaranteed commodity prices.

FIELD 05

Deliverables

- Master farm design + 3-year development plan
- Restored, carbon-rich soil (SOC uplift)
- Fully planted farm: orchards, medicinal, vegetables, flowers, water bodies
- Dedicated ex-servicemen supervisor
- Monthly per-plot online reports + annual owner review
- Branded produce sales; optional agri-tourism

FIELD 06

Activities & methodology

- Diagnose & design — soil and land baseline, and a custom master plan (S1 + S2).
- Restore the soil — biochar-enriched compost programme to rebuild soil organic carbon (S1).
- Develop & plant — infrastructure, water, mechanisation and planting to the design (S3).
- Operate & manage — day-to-day operations, supervision and training via the AOC (S3 + S4).
- Monetise & report — market/export linkage, carbon credits and per-plot reporting (S5 + S4).

FIELD 07

Service level (SLA)

Platinum — weekly/resident supervision, same-day response, real-time dashboard, dedicated relationship manager.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Clear land title & records, site access, water/power, statutory approvals, family Nakshatra details (if opted), any baseline data.

FIELD 10

Technology / platforms

AOC dashboard and per-plot mobile app; drones and IoT sensors; biochar / BEC production; carbon MRV (Puro.earth-type methodology); farm-management software.

FIELD 11

KPIs & success metrics

SOC %, yield/acre, biodiversity count, water saved, cost/acre, farm profitability, carbon sequestered.

FIELD 12

Reporting & outputs

Monthly online per-plot dashboard; quarterly review; annual impact + P&L statement.

FIELD 13

Commercial model

Enterprise / Premier edition · Design-Build-Operate bundle (fixed-price development + managed-service subscription and/or revenue-share).

FIELD 14

Indicative pricing (INR, ex-GST)

Development (one-time): ₹5–10 lakh/acre (density-dependent). Annual managed-farm fee: ₹45,000–85,000/acre/yr OR 18–25% revenue-share. Design: ₹20,000–35,000/acre. Nakshatra Vanam: ₹50,000–1,50,000. Bundle discount 10–15% vs à-la-carte.

FIELD 15

Timeline & milestones

Design 1–2 months; development ~6 months; operations multi-year (typically 8 years); the farming system stabilises over ~3 years.

FIELD 16

Quality assurance

SOP-driven delivery through the AOC; defined quality standards for BEC, water works and planting; per-plot monitoring; periodic internal audits and, for enterprise clients, third-party verification.

FIELD 17

ESG & sustainability outcomes

Carbon sequestration, 100–300 trees/acre, water conservation, rural livelihoods, healthy produce.

FIELD 18

Optional add-ons

Nakshatra Vanam; carbon-credit monetisation; organic certification; agri-tourism / wellness retreat; eco-stay design; drone surveys.

FIELD 19

Risks & exclusions

Excludes land purchase, title and statutory approvals (Gratitude Farms assists). Yields and commodity prices are not guaranteed; weather and market risk are mitigated by diversification, not eliminated.

FIELD 20

Compliance & legal

Natural-farming standards; optional organic / GI certification; carbon-standard compliance; applicable agricultural, land and environmental laws. All prices are exclusive of GST and statutory levies.

FIELD 21

Support & escalation

Dedicated relationship manager; documented change-request process; defined escalation matrix; scheduled service reviews (cadence per SLA tier).

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Managed Farmland Service

Client profile P2 · Corporates & PSUs (barren / degraded land, 100+ acres, ESG mandate)

P2 / 5

“End-to-end transformation of barren / degraded land into a profitable, biodiverse natural farm — S1 to S5 under one accountable contract.”

FIELD 01

Purpose & value proposition

The Managed Farmland Service is Gratitude Farms' flagship, integrated offering. It bundles Soil Fertility (S1), Farmland Design (S2), Farmland Operate (S3), the Agri-Operations Centre (S4) and Market Linkage (S5) into a single, end-to-end engagement with one point of accountability. The client hands over a landholding and receives back a designed, living, operating and monetised natural farm.

FIELD 02

Target profile & eligibility

Corporates and PSUs (e.g., cement, steel, power) holding 100+ acres of barren, unused or degraded land, with an ESG / CSR and net-zero mandate.

FIELD 03

Objectives (this profile)

Convert idle/degraded land into a long-term profitable asset; deliver auditable ESG/CSR outcomes (carbon, biodiversity, water, livelihoods); de-risk through professional management and governance.

FIELD 04

Scope (included / excluded)

Included: full S1–S5 at scale; ESG-grade MRV & reporting; governance & QA.

Excluded: land acquisition; the client's own statutory ESG disclosures (we supply audited data).

FIELD 05

Deliverables

- Land & soil baseline + restoration roadmap
- Large-scale biodiverse natural-farming development
- Carbon MRV + verified credits
- ESG/CSR impact dashboard + annual audited report (BRSR/GRI/SDG-mapped)
- Employment: ex-servicemen, women SHGs, youth
- Produce off-take / market linkage

FIELD 06

Activities & methodology

- Diagnose & design — soil and land baseline, and a custom master plan (S1 + S2).
- Restore the soil — biochar-enriched compost programme to rebuild soil organic carbon (S1).
- Develop & plant — infrastructure, water, mechanisation and planting to the design (S3).
- Operate & manage — day-to-day operations, supervision and training via the AOC (S3 + S4).
- Monetise & report — market/export linkage, carbon credits and per-plot reporting (S5 + S4).

FIELD 07

Service level (SLA)

Platinum + steering committee; SLA-linked outcome payments.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Land parcels & clearances, CSR/ESG mandate & budget, signed MoU, single point of contact, site security access.

FIELD 10

Technology / platforms

AOC dashboard and per-plot mobile app; drones and IoT sensors; biochar / BEC production; carbon MRV (Puro.earth-type methodology); farm-management software.

FIELD 11

KPIs & success metrics

Acres restored, tCO₂e sequestered, SOC uplift, biodiversity index, jobs created, water recharged, programme ROI, ESG-score contribution.

FIELD 12

Reporting & outputs

Monthly ops dashboard; quarterly business review; annual audited ESG & carbon report; board-ready pack.

FIELD 13

Commercial model

Enterprise edition · BOOT or outcome-based managed service (SLA-linked); optional GF co-investment; CSR/ESG-funded.

FIELD 14

Indicative pricing (INR, ex-GST)

Programme-based. Development: ₹2–5 lakh/acre (scale/density-dependent). Managed service: ₹30,000–60,000/acre/yr or outcome-based. AOC ESG platform: ₹8–25 lakh/yr. Carbon-credit revenue share (GF 20–30%). Indicative 100-acre programme: ₹3–6 crore over 3 years.

FIELD 15

Timeline & milestones

Design 1–2 months; development ~6 months; operations multi-year (typically 8 years); the farming system stabilises over ~3 years.

FIELD 16

Quality assurance

SOP-driven delivery through the AOC; defined quality standards for BEC, water works and planting; per-plot monitoring; periodic internal audits and, for enterprise clients, third-party verification.

FIELD 17

ESG & sustainability outcomes

Large-scale carbon sink, biodiversity restoration, water recharge, ex-servicemen & women livelihoods — mapped to BRSR/GRI/SDGs.

FIELD 18

Optional add-ons

Verified carbon credits, biodiversity certification, employee CSR engagement visits, ‘restored-land’ branded produce, agro-forestry timber.

FIELD 19

Risks & exclusions

Excludes land purchase, title and statutory approvals (Gratitude Farms assists). Yields and commodity prices are not guaranteed; weather and market risk are mitigated by diversification, not eliminated.

FIELD 20

Compliance & legal

Natural-farming standards; optional organic / GI certification; carbon-standard compliance; applicable agricultural, land and environmental laws. All prices are exclusive of GST and statutory levies.

FIELD 21

Support & escalation

Dedicated relationship manager; documented change-request process; defined escalation matrix; scheduled service reviews (cadence per SLA tier).

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Managed Farmland Service

Client profile P3 · FPOs / Village-level Organisations (aggregated member farms)

P3 / 5

“End-to-end transformation of barren / degraded land into a profitable, biodiverse natural farm — S1 to S5 under one accountable contract.”

FIELD 01

Purpose & value proposition

The Managed Farmland Service is Gratitude Farms' flagship, integrated offering. It bundles Soil Fertility (S1), Farmland Design (S2), Farmland Operate (S3), the Agri-Operations Centre (S4) and Market Linkage (S5) into a single, end-to-end engagement with one point of accountability. The client hands over a landholding and receives back a designed, living, operating and monetised natural farm.

FIELD 02

Target profile & eligibility

Registered Farmer Producer Organisations or village-level organisations aggregating multiple small and marginal member farms into a cluster.

FIELD 03

Objectives (this profile)

Cluster-scale conversion to natural farming; member capacity-building; input supply, aggregation and market/export access; higher member incomes (2.5–3x).

FIELD 04

Scope (included / excluded)

Included: cluster S1 (BEC), S2 template design, S3 operate + training, S4 shared dashboard, S5 aggregation/export.

Excluded: individual member land titles; income guarantees.

FIELD 05

Deliverables

- Cluster soil-fertility programme + BEC supply
- Standardised farm-design templates
- Farmer training & FPO capacity building
- Shared AOC dashboard & reporting
- Aggregation, branding & market/export linkage
- Cluster-level carbon-credit aggregation

FIELD 06

Activities & methodology

- Diagnose & design — soil and land baseline, and a custom master plan (S1 + S2).
- Restore the soil — biochar-enriched compost programme to rebuild soil organic carbon (S1).
- Develop & plant — infrastructure, water, mechanisation and planting to the design (S3).
- Operate & manage — day-to-day operations, supervision and training via the AOC (S3 + S4).
- Monetise & report — market/export linkage, carbon credits and per-plot reporting (S5 + S4).

FIELD 07

Service level (SLA)

Gold (cluster-level) with a shared resident agronomist.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

FPO registration, member & land data, aggregation infrastructure, bank/credit linkage, willingness to co-invest.

FIELD 10

Technology / platforms

AOC dashboard and per-plot mobile app; drones and IoT sensors; biochar / BEC production; carbon MRV (Puro.earth-type methodology); farm-management software.

FIELD 11

KPIs & success metrics

Members onboarded, acres converted, yield uplift, input-cost reduction, price realisation, credits generated, member income.

FIELD 12

Reporting & outputs

Monthly cluster dashboard; quarterly FPO review; season-end impact report.

FIELD 13

Commercial model

Enterprise (Cluster) edition · blended finance (NABARD/CSR/grants) + revenue-share + membership.

FIELD 14

Indicative pricing (INR, ex-GST)

Largely blended-finance funded. GF facilitation fee: ₹8,000–20,000/acre + 5–10% revenue-share. BEC: ₹15,000–20,000/tonne (bulk). Membership/aggregation: ₹50,000–2,00,000/FPO/yr. Training: grant/CSR-funded.

FIELD 15

Timeline & milestones

Design 1–2 months; development ~6 months; operations multi-year (typically 8 years); the farming system stabilises over ~3 years.

FIELD 16

Quality assurance

SOP-driven delivery through the AOC; defined quality standards for BEC, water works and planting; per-plot monitoring; periodic internal audits and, for enterprise clients, third-party verification.

FIELD 17

ESG & sustainability outcomes

Livelihoods for small farmers, women SHGs and youth; soil & water restoration; inclusive carbon revenue.

FIELD 18

Optional add-ons

Export facilitation, organic/GI certification, warehousing, micro-processing units, carbon aggregation.

FIELD 19

Risks & exclusions

Excludes land purchase, title and statutory approvals (Gratitude Farms assists). Yields and commodity prices are not guaranteed; weather and market risk are mitigated by diversification, not eliminated.

FIELD 20

Compliance & legal

Natural-farming standards; optional organic / GI certification; carbon-standard compliance; applicable agricultural, land and environmental laws. All prices are exclusive of GST and statutory levies.

FIELD 21

Support & escalation

Dedicated relationship manager; documented change-request process; defined escalation matrix; scheduled service reviews (cadence per SLA tier).

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Managed Farmland Service

Client profile P4 · Small Landholders (5–20 acres)

P4 / 5

“End-to-end transformation of barren / degraded land into a profitable, biodiverse natural farm — S1 to S5 under one accountable contract.”

FIELD 01

Purpose & value proposition

The Managed Farmland Service is Gratitude Farms' flagship, integrated offering. It bundles Soil Fertility (S1), Farmland Design (S2), Farmland Operate (S3), the Agri-Operations Centre (S4) and Market Linkage (S5) into a single, end-to-end engagement with one point of accountability. The client hands over a landholding and receives back a designed, living, operating and monetised natural farm.

FIELD 02

Target profile & eligibility

Individual small landholders with 5–20 acres seeking an affordable, full-service conversion to natural farming with dependable management and market linkage.

FIELD 03

Objectives (this profile)

Affordable full-service conversion to a productive, diversified natural farm with dependable management and market linkage, and meaningful income uplift.

FIELD 04

Scope (included / excluded)

Included: S1 remediation, S2 custom design, S3 managed operation, S4 dashboard, S5 linkage.

Excluded: land purchase; guaranteed prices.

FIELD 05

Deliverables

- Soil restoration + BEC
- Custom farm design (diversified crops/trees)
- Development + ongoing managed operation
- AOC dashboard + monthly reports
- Produce marketing & linkage
- Optional short-format agri-tourism

FIELD 06

Activities & methodology

- Diagnose & design — soil and land baseline, and a custom master plan (S1 + S2).
- Restore the soil — biochar-enriched compost programme to rebuild soil organic carbon (S1).
- Develop & plant — infrastructure, water, mechanisation and planting to the design (S3).
- Operate & manage — day-to-day operations, supervision and training via the AOC (S3 + S4).
- Monetise & report — market/export linkage, carbon credits and per-plot reporting (S5 + S4).

FIELD 07

Service level (SLA)

Gold (fortnightly visits, monthly reporting).

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Land records, access, water source, approvals, baseline data, co-investment / loan.

FIELD 10

Technology / platforms

AOC dashboard and per-plot mobile app; drones and IoT sensors; biochar / BEC production; carbon MRV (Puro.earth-type methodology); farm-management software.

FIELD 11

KPIs & success metrics

SOC %, yield/acre, input-cost saving, revenue diversification, profitability, water saved.

FIELD 12

Reporting & outputs

Monthly dashboard; quarterly review.

FIELD 13

Commercial model

Professional edition · Design-Build-Operate (fixed-price development + managed-service subscription).

FIELD 14

Indicative pricing (INR, ex-GST)

Development: ₹3–7 lakh/acre. Managed-farm fee: ₹35,000–60,000/acre/yr OR 15–20% revenue-share. Design: ₹15,000–30,000/acre. NABARD/bank EMI options.

FIELD 15

Timeline & milestones

Design 1–2 months; development ~6 months; operations multi-year (typically 8 years); the farming system stabilises over ~3 years.

FIELD 16

Quality assurance

SOP-driven delivery through the AOC; defined quality standards for BEC, water works and planting; per-plot monitoring; periodic internal audits and, for enterprise clients, third-party verification.

FIELD 17

ESG & sustainability outcomes

Soil & water restoration, tree cover, family livelihood, healthy produce.

FIELD 18

Optional add-ons

Agri-tourism, carbon credits, certification, drone survey, farm-stay.

FIELD 19

Risks & exclusions

Excludes land purchase, title and statutory approvals (Gratitude Farms assists). Yields and commodity prices are not guaranteed; weather and market risk are mitigated by diversification, not eliminated.

FIELD 20

Compliance & legal

Natural-farming standards; optional organic / GI certification; carbon-standard compliance; applicable agricultural, land and environmental laws. All prices are exclusive of GST and statutory levies.

FIELD 21

Support & escalation

Dedicated relationship manager; documented change-request process; defined escalation matrix; scheduled service reviews (cadence per SLA tier).

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Managed Farmland Service

Client profile P5 · Small & Marginal Holders (< 5 acres)

P5 / 5

“End-to-end transformation of barren / degraded land into a profitable, biodiverse natural farm — S1 to S5 under one accountable contract.”

**FIELD 01****Purpose & value proposition**

The Managed Farmland Service is Gratitude Farms' flagship, integrated offering. It bundles Soil Fertility (S1), Farmland Design (S2), Farmland Operate (S3), the Agri-Operations Centre (S4) and Market Linkage (S5) into a single, end-to-end engagement with one point of accountability. The client hands over a landholding and receives back a designed, living, operating and monetised natural farm.

**FIELD 02****Target profile & eligibility**

Small and marginal farmers with under 5 acres, served through group / FPO aggregation and blended finance.

**FIELD 03****Objectives (this profile)**

Low-cost, modular entry to natural farming via group delivery; productivity and income improvement; access to inputs, knowledge and markets.

**FIELD 04****Scope (included / excluded)**

Included: Essential S1 (BEC + soil test), template design, group operate support, app reporting, group market linkage.

Excluded: full dedicated development; individual on-site supervisor.

**FIELD 05****Deliverables**

- Soil test + BEC supply (group buy)
- Standard plot-design template
- Group training & shared supervision
- App-based monitoring & advisories
- Group aggregation & sale of produce

**FIELD 06****Activities & methodology**

- Diagnose & design — soil and land baseline, and a custom master plan (S1 + S2).
- Restore the soil — biochar-enriched compost programme to rebuild soil organic carbon (S1).
- Develop & plant — infrastructure, water, mechanisation and planting to the design (S3).
- Operate & manage — day-to-day operations, supervision and training via the AOC (S3 + S4).
- Monetise & report — market/export linkage, carbon credits and per-plot reporting (S5 + S4).

**FIELD 07****Service level (SLA)**

Silver (monthly group visit, app support).

**FIELD 08****Roles & responsibilities**

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

**FIELD 09****Client inputs required**

Land record, group/FPO membership, site access, basic co-payment.

**FIELD 10****Technology / platforms**

AOC dashboard and per-plot mobile app; drones and IoT sensors; biochar / BEC production; carbon MRV (Puro.earth-type methodology); farm-management software.

**FIELD 11****KPIs & success metrics**

Yield uplift, input-cost saving, price realisation, adoption rate, income increase.

**FIELD 12****Reporting & outputs**

App-based advisories; quarterly group report.

FIELD 13
Commercial model

Essential edition · group/FPO-aggregated; blended finance; low fixed fee + commission on sales.

FIELD 14
Indicative pricing (INR, ex-GST)

Entry package: ₹40,000–1,20,000/acre (modular, group-delivered). BEC: ₹18,000–25,000/tonne. AOC app: ₹3,000–6,000/plot/yr. Market linkage: 8–12% commission. CSR/subsidy reduces net cost.

FIELD 15
Timeline & milestones

Design 1–2 months; development ~6 months; operations multi-year (typically 8 years); the farming system stabilises over ~3 years.

FIELD 16
Quality assurance

SOP-driven delivery through the AOC; defined quality standards for BEC, water works and planting; per-plot monitoring; periodic internal audits and, for enterprise clients, third-party verification.

FIELD 17
ESG & sustainability outcomes

Inclusive smallholder livelihood, soil health, reduced chemical use.

FIELD 18
Optional add-ons

Agri-tourism co-op, carbon aggregation, FPO certification, micro-processing.

FIELD 19
Risks & exclusions

Excludes land purchase, title and statutory approvals (Gratitude Farms assists). Yields and commodity prices are not guaranteed; weather and market risk are mitigated by diversification, not eliminated.

FIELD 20
Compliance & legal

Natural-farming standards; optional organic / GI certification; carbon-standard compliance; applicable agricultural, land and environmental laws. All prices are exclusive of GST and statutory levies.

FIELD 21
Support & escalation

Dedicated relationship manager; documented change-request process; defined escalation matrix; scheduled service reviews (cadence per SLA tier).

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Soil Fertility Services

Brand name: *BhuPrana™ · SFS*

Rebuild living soil — diagnostics, biochar, enriched compost, microbial inputs and multi-season fertility restoration.

Individuals / NRIs / Family Foundations
20+ acres

Corporates & PSUs
barren / degraded land, 100+ acres,
ESG mandate

FPOs / Village-level Organisations
aggregated member farms

Small Landholders
5–20 acres

Small & Marginal Holders
< 5 acres

Soil Fertility Services (BhuPrana™)

Client profile P1 · Individuals / NRIs / Family Foundations (20+ acres)

P1 / 5

“Rebuild living soil — diagnostics, biochar, enriched compost, microbial inputs and multi-season fertility restoration.”

FIELD 01

Purpose & value proposition

Soil Fertility Services restores soil organic carbon and soil biology through a circular bio-economy — converting waste and invasive biomass into biochar, blending it into Biochar-Enriched Compost (BEC), and returning it to the soil, where the carbon persists for centuries. It is the foundation of every Gratitude farm and a national-scale service in its own right.

FIELD 02

Target profile & eligibility

Individual, NRI or family-foundation owners with a landholding of 20 acres or more, seeking a managed, high-value natural farm and a multi-generational legacy / wellness asset.

FIELD 03

Objectives (this profile)

Restore a genuinely living, carbon-rich soil across the estate as the basis for a high-value farm; measurable, reported outcomes.

FIELD 04

Scope (included / excluded)

Included: full soil diagnostics, BEC supply & application, multi-season programme, monitoring, carbon enablement.

Excluded: chemical fertilisers; civil works (S2/S3).

FIELD 05

Deliverables

- Detailed soil-health & SOC report
- BEC supply @ ~2 T/acre/yr
- Application + multi-season schedule
- SOC/water/yield monitoring
- Carbon documentation

FIELD 06

Activities & methodology

- Diagnose — soil and SOC assessment; biomass mapping; a per-site remediation plan.
- Set up supply — biochar and BEC production (central AOC unit or dedicated unit).
- Build the soil — multi-season BEC application; microbial and botanical inputs.
- Measure & verify — SOC, water and yield monitoring; carbon documentation.
- Sustain — hand a living, carbon-rich soil to design/operate or to the farmer's cultivation.

FIELD 07

Service level (SLA)

Platinum/Gold — fortnightly monitoring, detailed reporting.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Site access, water, soil-sampling permission, any prior soil data.

FIELD 10

Technology / platforms

Soil-biology diagnostics; continuous-pyrolysis biochar reactor; BEC formulation to standard; SOC/water monitoring; carbon MRV tools.

FIELD 11

KPIs & success metrics

SOC %, water retention, input-cost saving, yield response, carbon locked.

FIELD 12

Reporting & outputs

Season-wise soil reports; annual SOC-progress statement.

**FIELD 13****Commercial model**

Premier edition · per-acre remediation service fee + BEC product sales.

**FIELD 14****Indicative pricing (INR, ex-GST)**

Soil diagnostics: ₹10,000–15,000/site. Remediation service: ₹35,000–45,000/acre/yr. BEC: ₹18,000–25,000/tonne. Carbon-credit revenue share (GF 20–30%).

**FIELD 15****Timeline & milestones**

Diagnostics 2–4 weeks; first BEC application within the season; measurable SOC uplift over 1–3 seasons; carbon-credit stream typically from Year 2.

**FIELD 16****Quality assurance**

Controlled BEC formulation (approx. 1:5 biochar:compost) and quality testing; calibrated application rates (~2 T/acre/yr); documented SOC measurement (Walkley & Black / lab).

**FIELD 17****ESG & sustainability outcomes**

Soil carbon sink, reduced chemical load, water conservation.

**FIELD 18****Optional add-ons**

Carbon-credit monetisation, organic certification, micro-nutrient customisation.

**FIELD 19****Risks & exclusions**

Excludes chemical fertilisers and civil works. SOC response varies with soil type, climate and management; carbon revenue depends on verification and market prices.

**FIELD 20****Compliance & legal**

Input quality and bio-input norms; carbon-standard methodology compliance; environmental norms for biomass and pyrolysis. GST extra.

**FIELD 21****Support & escalation**

Agronomy support line; documented change requests; escalation matrix; season-end review.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

“Rebuild living soil — diagnostics, biochar, enriched compost, microbial inputs and multi-season fertility restoration.”

FIELD 01

Purpose & value proposition

Soil Fertility Services restores soil organic carbon and soil biology through a circular bio-economy — converting waste and invasive biomass into biochar, blending it into Biochar-Enriched Compost (BEC), and returning it to the soil, where the carbon persists for centuries. It is the foundation of every Gratitude farm and a national-scale service in its own right.

FIELD 02

Target profile & eligibility

Corporates and PSUs (e.g., cement, steel, power) holding 100+ acres of barren, unused or degraded land, with an ESG / CSR and net-zero mandate.

FIELD 03

Objectives (this profile)

Large-scale soil restoration as a measurable ESG/carbon outcome; optionally own a biochar-BEC production unit; monetise carbon credits.

FIELD 04

Scope (included / excluded)

Included: baseline, large-scale remediation, MRV, carbon credits; optional turnkey unit + technology licence.

Excluded: client's statutory disclosures (audited data supplied).

FIELD 05

Deliverables

- Land-wide soil & carbon baseline
- Large-scale BEC supply & application
- Carbon MRV + verified credits
- Optional turnkey biochar-BEC unit (47-SOP)
- ESG/carbon audited report

FIELD 06

Activities & methodology

- Diagnose — soil and SOC assessment; biomass mapping; a per-site remediation plan.
- Set up supply — biochar and BEC production (central AOC unit or dedicated unit).
- Build the soil — multi-season BEC application; microbial and botanical inputs.
- Measure & verify — SOC, water and yield monitoring; carbon documentation.
- Sustain — hand a living, carbon-rich soil to design/operate or to the farmer's cultivation.

FIELD 07

Service level (SLA)

Platinum + steering committee.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Land parcels, biomass access, ESG/CSR budget, MoU, SPOC.

FIELD 10

Technology / platforms

Soil-biology diagnostics; continuous-pyrolysis biochar reactor; BEC formulation to standard; SOC/water monitoring; carbon MRV tools.

FIELD 11

KPIs & success metrics

Acres restored, SOC uplift, tCO2e sequestered & credited, biomass processed, unit uptime.

FIELD 12

Reporting & outputs

Monthly ops + quarterly review + annual audited ESG/carbon report.

**FIELD 13****Commercial model**

Enterprise edition · remediation managed service or turnkey unit (licence + platform fee); outcome/carbon-linked.

**FIELD 14****Indicative pricing (INR, ex-GST)**

Remediation: ₹25,000–40,000/acre/yr. Turnkey biochar-BEC unit: ₹1.5–3.5 crore + AOC/tech licence (4% royalty + platform fee). Carbon-credit revenue share (GF 20–30%).

**FIELD 15****Timeline & milestones**

Diagnostics 2–4 weeks; first BEC application within the season; measurable SOC uplift over 1–3 seasons; carbon-credit stream typically from Year 2.

**FIELD 16****Quality assurance**

Controlled BEC formulation (approx. 1:5 biochar:compost) and quality testing; calibrated application rates (~2 T/acre/yr); documented SOC measurement (Walkley & Black / lab).

**FIELD 17****ESG & sustainability outcomes**

Verified carbon removal, invasive-biomass clearance, water recharge, livelihoods.

**FIELD 18****Optional add-ons**

Verified carbon credits, biodiversity MRV, biomass-supply-chain setup, wood-vinegar co-products.

**FIELD 19****Risks & exclusions**

Excludes chemical fertilisers and civil works. SOC response varies with soil type, climate and management; carbon revenue depends on verification and market prices.

**FIELD 20****Compliance & legal**

Input quality and bio-input norms; carbon-standard methodology compliance; environmental norms for biomass and pyrolysis. GST extra.

**FIELD 21****Support & escalation**

Agronomy support line; documented change requests; escalation matrix; season-end review.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

“Rebuild living soil — diagnostics, biochar, enriched compost, microbial inputs and multi-season fertility restoration.”

FIELD 01

Purpose & value proposition

Soil Fertility Services restores soil organic carbon and soil biology through a circular bio-economy — converting waste and invasive biomass into biochar, blending it into Biochar-Enriched Compost (BEC), and returning it to the soil, where the carbon persists for centuries. It is the foundation of every Gratitude farm and a national-scale service in its own right.

FIELD 02

Target profile & eligibility

Registered Farmer Producer Organisations or village-level organisations aggregating multiple small and marginal member farms into a cluster.

FIELD 03

Objectives (this profile)

Affordable, bulk soil-fertility restoration across member farms; local BEC access; cluster carbon aggregation.

FIELD 04

Scope (included / excluded)

Included: bulk BEC supply, shared production unit, application guidance, training, carbon aggregation.

Excluded: individual guarantees.

FIELD 05

Deliverables

- Cluster soil assessment
- Bulk BEC supply (subsidised)
- Shared biochar-BEC unit / access
- Farmer training on application
- Cluster carbon aggregation

FIELD 06

Activities & methodology

- Diagnose — soil and SOC assessment; biomass mapping; a per-site remediation plan.
- Set up supply — biochar and BEC production (central AOC unit or dedicated unit).
- Build the soil — multi-season BEC application; microbial and botanical inputs.
- Measure & verify — SOC, water and yield monitoring; carbon documentation.
- Sustain — hand a living, carbon-rich soil to design/operate or to the farmer's cultivation.

FIELD 07

Service level (SLA)

Gold (cluster).

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

FPO & member data, aggregation shed, biomass access, co-investment.

FIELD 10

Technology / platforms

Soil-biology diagnostics; continuous-pyrolysis biochar reactor; BEC formulation to standard; SOC/water monitoring; carbon MRV tools.

FIELD 11

KPIs & success metrics

Acres treated, BEC tonnes supplied, yield/cost impact, credits aggregated.

FIELD 12

Reporting & outputs

Monthly cluster dashboard; season-end report.

FIELD 13

Commercial model

Enterprise (Cluster) edition · blended finance + bulk BEC sales + carbon share.

FIELD 14

Indicative pricing (INR, ex-GST)

BEC (bulk): ₹15,000–20,000/tonne. GF facilitation: ₹8,000–15,000/acre. Shared unit via blended finance. Training grant/CSR-funded.

FIELD 15

Timeline & milestones

Diagnostics 2–4 weeks; first BEC application within the season; measurable SOC uplift over 1–3 seasons; carbon-credit stream typically from Year 2.

FIELD 16

Quality assurance

Controlled BEC formulation (approx. 1:5 biochar:compost) and quality testing; calibrated application rates (~2 T/acre/yr); documented SOC measurement (Walkley & Black / lab).

FIELD 17

ESG & sustainability outcomes

Smallholder soil restoration, inclusive carbon revenue, biomass reuse.

FIELD 18

Optional add-ons

Shared unit ownership, export-grade BEC, GI/organic certification.

FIELD 19

Risks & exclusions

Excludes chemical fertilisers and civil works. SOC response varies with soil type, climate and management; carbon revenue depends on verification and market prices.

FIELD 20

Compliance & legal

Input quality and bio-input norms; carbon-standard methodology compliance; environmental norms for biomass and pyrolysis. GST extra.

FIELD 21

Support & escalation

Agronomy support line; documented change requests; escalation matrix; season-end review.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

“Rebuild living soil — diagnostics, biochar, enriched compost, microbial inputs and multi-season fertility restoration.”

FIELD 01

Purpose & value proposition

Soil Fertility Services restores soil organic carbon and soil biology through a circular bio-economy — converting waste and invasive biomass into biochar, blending it into Biochar-Enriched Compost (BEC), and returning it to the soil, where the carbon persists for centuries. It is the foundation of every Gratitude farm and a national-scale service in its own right.

FIELD 02

Target profile & eligibility

Individual small landholders with 5–20 acres seeking an affordable, full-service conversion to natural farming with dependable management and market linkage.

FIELD 03

Objectives (this profile)

Affordable per-acre soil restoration with clear yield and input-cost benefits.

FIELD 04

Scope (included / excluded)

Included: soil test, BEC supply & application, multi-season programme, monitoring.

Excluded: chemicals; civil works.

FIELD 05

Deliverables

- Soil-health report
- BEC supply & application
- Multi-season schedule
- Yield & cost tracking

FIELD 06

Activities & methodology

- Diagnose — soil and SOC assessment; biomass mapping; a per-site remediation plan.
- Set up supply — biochar and BEC production (central AOC unit or dedicated unit).
- Build the soil — multi-season BEC application; microbial and botanical inputs.
- Measure & verify — SOC, water and yield monitoring; carbon documentation.
- Sustain — hand a living, carbon-rich soil to design/operate or to the farmer's cultivation.

FIELD 07

Service level (SLA)

Gold (monthly).

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Site access, water, prior data, co-payment/loan.

FIELD 10

Technology / platforms

Soil-biology diagnostics; continuous-pyrolysis biochar reactor; BEC formulation to standard; SOC/water monitoring; carbon MRV tools.

FIELD 11

KPIs & success metrics

SOC %, input-cost saving, yield response.

FIELD 12

Reporting & outputs

Season reports; app updates.

FIELD 13

Commercial model

Professional edition · per-acre remediation + BEC sales.

FIELD 14

Indicative pricing (INR, ex-GST)

Soil test: ₹5,000–10,000/site. Remediation: ₹30,000–40,000/acre/yr. BEC: ₹18,000–25,000/tonne. EMI options.

FIELD 15

Timeline & milestones

Diagnostics 2–4 weeks; first BEC application within the season; measurable SOC uplift over 1–3 seasons; carbon-credit stream typically from Year 2.

FIELD 16

Quality assurance

Controlled BEC formulation (approx. 1:5 biochar:compost) and quality testing; calibrated application rates (~2 T/acre/yr); documented SOC measurement (Walkley & Black / lab).

FIELD 17

ESG & sustainability outcomes

Soil health, reduced chemicals, water saving.

FIELD 18

Optional add-ons

Carbon aggregation, certification.

FIELD 19

Risks & exclusions

Excludes chemical fertilisers and civil works. SOC response varies with soil type, climate and management; carbon revenue depends on verification and market prices.

FIELD 20

Compliance & legal

Input quality and bio-input norms; carbon-standard methodology compliance; environmental norms for biomass and pyrolysis. GST extra.

FIELD 21

Support & escalation

Agronomy support line; documented change requests; escalation matrix; season-end review.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

“Rebuild living soil — diagnostics, biochar, enriched compost, microbial inputs and multi-season fertility restoration.”

FIELD 01

Purpose & value proposition

Soil Fertility Services restores soil organic carbon and soil biology through a circular bio-economy — converting waste and invasive biomass into biochar, blending it into Biochar-Enriched Compost (BEC), and returning it to the soil, where the carbon persists for centuries. It is the foundation of every Gratitude farm and a national-scale service in its own right.

FIELD 02

Target profile & eligibility

Small and marginal farmers with under 5 acres, served through group / FPO aggregation and blended finance.

FIELD 03

Objectives (this profile)

Low-cost first step to living soil — a soil test and BEC via group purchase.

FIELD 04

Scope (included / excluded)

Included: basic soil test, group BEC supply, application advisory.

Excluded: full remediation programme, dedicated monitoring.

FIELD 05

Deliverables

- Basic soil test
- BEC supply (group buy)
- Application advisory (app/group)

FIELD 06

Activities & methodology

- Diagnose — soil and SOC assessment; biomass mapping; a per-site remediation plan.
- Set up supply — biochar and BEC production (central AOC unit or dedicated unit).
- Build the soil — multi-season BEC application; microbial and botanical inputs.
- Measure & verify — SOC, water and yield monitoring; carbon documentation.
- Sustain — hand a living, carbon-rich soil to design/operate or to the farmer's cultivation.

FIELD 07

Service level (SLA)

Silver (monthly group).

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Land record, group membership, co-payment.

FIELD 10

Technology / platforms

Soil-biology diagnostics; continuous-pyrolysis biochar reactor; BEC formulation to standard; SOC/water monitoring; carbon MRV tools.

FIELD 11

KPIs & success metrics

Yield uplift, input-cost saving, adoption.

FIELD 12

Reporting & outputs

App advisories; quarterly group report.

FIELD 13

Commercial model

Essential edition · group/FPO-aggregated; blended finance.

FIELD 14

Indicative pricing (INR, ex-GST)

Soil test: ₹1,500–3,000/plot. BEC: ₹18,000–25,000/tonne (group). CSR/subsidy reduces net cost.

FIELD 15

Timeline & milestones

Diagnostics 2–4 weeks; first BEC application within the season; measurable SOC uplift over 1–3 seasons; carbon-credit stream typically from Year 2.

FIELD 16

Quality assurance

Controlled BEC formulation (approx. 1:5 biochar:compost) and quality testing; calibrated application rates (~2 T/acre/yr); documented SOC measurement (Walkley & Black / lab).

FIELD 17

ESG & sustainability outcomes

Inclusive soil restoration, reduced chemical use.

FIELD 18

Optional add-ons

Cluster carbon aggregation, certification via FPO.

FIELD 19

Risks & exclusions

Excludes chemical fertilisers and civil works. SOC response varies with soil type, climate and management; carbon revenue depends on verification and market prices.

FIELD 20

Compliance & legal

Input quality and bio-input norms; carbon-standard methodology compliance; environmental norms for biomass and pyrolysis. GST extra.

FIELD 21

Support & escalation

Agronomy support line; documented change requests; escalation matrix; season-end review.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Farmland Design Services

Brand name: *Vasudha™ · FDS*

Master-plan the land — zoning, cropping systems, water and infrastructure design for a productive, biodiverse farm.

Individuals / NRIs / Family Foundations

20+ acres

Corporates & PSUs

barren / degraded land, 100+ acres,
ESG mandate

FPOs / Village-level Organisations

aggregated member farms

Small Landholders

5–20 acres

Small & Marginal Holders

< 5 acres

“Design every square foot — master planning, water, crop/tree design, biodiversity and the optional Nakshatra Vanam.”

FIELD 01

Purpose & value proposition

Farmland Design Services converts a featureless, barren or under-used holding into a fully-designed, biodiverse, water-secure, revenue-diversified natural farm. Beginning from the site's contours and satellite image, we design the placement of every zone so that water flows where it should and the farm is beautiful as well as productive.

FIELD 02

Target profile & eligibility

Individual, NRI or family-foundation owners with a landholding of 20 acres or more, seeking a managed, high-value natural farm and a multi-generational legacy / wellness asset.

FIELD 03

Objectives (this profile)

A bespoke, beautiful, biodiverse farm design aligned to the family's goals — optionally an astro-botanical Nakshatra Vanam.

FIELD 04

Scope (included / excluded)

Included: full survey, master design, planting & water design, visualisations, BoQ, Nakshatra Vanam (optional).

Excluded: physical development (S3).

FIELD 05

Deliverables

- Survey report
- Custom master layout + 3D visuals
- Planting scheme + water design
- Bill of quantities
- Revenue-diversification plan
- Nakshatra Vanam design (optional)

FIELD 06

Activities & methodology

- Discover — survey the land and understand goals, budget, timeline and (optionally) family Nakshatras.
- Design — master layout, planting scheme, water design and revenue-diversification plan, with visualisations.
- Validate — review with the client, iterate, and finalise a buildable plan and bill of quantities.
- Handover — pass the approved design to Farmland Operate (S3) or the client's own team.

FIELD 07

Service level (SLA)

Platinum design service — dedicated designer, iterative reviews.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Site access & survey permission, goals/budget, family Nakshatra details (if opted).

FIELD 10

Technology / platforms

Contour/satellite survey and GIS mapping; CAD/3D layout visualisation; agro-forestry and water-design tools; Nakshatra-tree mapping.

FIELD 11

KPIs & success metrics

Design sign-off, diversification & biodiversity targets, water self-sufficiency.

FIELD 12

Reporting & outputs

Design milestones; final design dossier.

FIELD 13

Commercial model

Premier edition · fixed-price design fee (+ Nakshatra Vanam premium).

FIELD 14

Indicative pricing (INR, ex-GST)

Design: ₹25,000–40,000/acre (min project ₹2–3 lakh). Nakshatra Vanam: ₹50,000–1,50,000. Drone survey: ₹500–1,500/acre.

FIELD 15

Timeline & milestones

Survey 1–2 weeks; draft design 2–4 weeks; finalisation after client review — typically 4–8 weeks end-to-end.

FIELD 16

Quality assurance

Design reviewed against water balance, biodiversity and buildability; bill of quantities validated; client sign-off gate before handover.

FIELD 17

ESG & sustainability outcomes

Biodiversity by design, water security, long-life tree cover.

FIELD 18

Optional add-ons

Nakshatra Vanam, eco-stay/villa design, agri-tourism concept, drone survey.

FIELD 19

Risks & exclusions

Excludes physical development. A design de-risks but does not guarantee yields or returns; statutory land-use constraints are the client's responsibility (assisted).

FIELD 20

Compliance & legal

Land-use and setback norms; water-body and rain-water-harvesting norms; applicable local regulations. GST extra.

FIELD 21

Support & escalation

Design account manager; iterative review cycles; documented change requests; escalation matrix.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

“Design every square foot — master planning, water, crop/tree design, biodiversity and the optional Nakshatra Vanam.”

FIELD 01

Purpose & value proposition

Farmland Design Services converts a featureless, barren or under-used holding into a fully-designed, biodiverse, water-secure, revenue-diversified natural farm. Beginning from the site's contours and satellite image, we design the placement of every zone so that water flows where it should and the farm is beautiful as well as productive.

FIELD 02

Target profile & eligibility

Corporates and PSUs (e.g., cement, steel, power) holding 100+ acres of barren, unused or degraded land, with an ESG / CSR and net-zero mandate.

FIELD 03

Objectives (this profile)

A scalable, replicable, ecological-restoration master-plan for large degraded land, engineered for ESG outcomes and phased development.

FIELD 04

Scope (included / excluded)

Included: large-area survey, ecological-restoration master-plan, water/agro-forestry design, phasing, BoQ.

Excluded: development build (S3).

FIELD 05

Deliverables

- Land-wide survey & GIS mapping
- Ecological-restoration master-plan
- Agro-forestry & water design
- Phased development plan + BoQ
- Biodiversity & carbon design targets

FIELD 06

Activities & methodology

- Discover — survey the land and understand goals, budget, timeline and (optionally) family Nakshatras.
- Design — master layout, planting scheme, water design and revenue-diversification plan, with visualisations.
- Validate — review with the client, iterate, and finalise a buildable plan and bill of quantities.
- Handover — pass the approved design to Farmland Operate (S3) or the client's own team.

FIELD 07

Service level (SLA)

Platinum + review committee.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Land parcels, GIS/survey access, ESG targets, MoU.

FIELD 10

Technology / platforms

Contour/satellite survey and GIS mapping; CAD/3D layout visualisation; agro-forestry and water-design tools; Nakshatra-tree mapping.

FIELD 11

KPIs & success metrics

Area planned, projected tCO2e & biodiversity, water-recharge design, phasing clarity.

FIELD 12

Reporting & outputs

Master-plan dossier; phase-wise BoQ.

FIELD 13

Commercial model

Enterprise edition · fixed-price master-plan (volume-priced per acre).

FIELD 14

Indicative pricing (INR, ex-GST)

Master-plan design: ₹8,000–18,000/acre (volume-scaled). GIS/baseline: ₹2–6 lakh/project.

FIELD 15

Timeline & milestones

Survey 1–2 weeks; draft design 2–4 weeks; finalisation after client review — typically 4–8 weeks end-to-end.

FIELD 16

Quality assurance

Design reviewed against water balance, biodiversity and buildability; bill of quantities validated; client sign-off gate before handover.

FIELD 17

ESG & sustainability outcomes

Designed carbon sink, biodiversity corridors, water recharge.

FIELD 18

Optional add-ons

Carbon/biodiversity baseline, GIS dashboards, community-land integration.

FIELD 19

Risks & exclusions

Excludes physical development. A design de-risks but does not guarantee yields or returns; statutory land-use constraints are the client's responsibility (assisted).

FIELD 20

Compliance & legal

Land-use and setback norms; water-body and rain-water-harvesting norms; applicable local regulations. GST extra.

FIELD 21

Support & escalation

Design account manager; iterative review cycles; documented change requests; escalation matrix.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

“Design every square foot — master planning, water, crop/tree design, biodiversity and the optional Nakshatra Vanam.”

FIELD 01

Purpose & value proposition

Farmland Design Services converts a featureless, barren or under-used holding into a fully-designed, biodiverse, water-secure, revenue-diversified natural farm. Beginning from the site's contours and satellite image, we design the placement of every zone so that water flows where it should and the farm is beautiful as well as productive.

FIELD 02

Target profile & eligibility

Registered Farmer Producer Organisations or village-level organisations aggregating multiple small and marginal member farms into a cluster.

FIELD 03

Objectives (this profile)

Standardised, low-cost farm-design templates that members can adopt at scale.

FIELD 04

Scope (included / excluded)

Included: cluster template designs, planting schemes, shared water design.

Excluded: individual bespoke design.

FIELD 05

Deliverables

- Standard plot-design templates (by size)
- Planting schemes
- Shared water/harvesting design
- Training on layout

FIELD 06

Activities & methodology

- Discover — survey the land and understand goals, budget, timeline and (optionally) family Nakshatras.
- Design — master layout, planting scheme, water design and revenue-diversification plan, with visualisations.
- Validate — review with the client, iterate, and finalise a buildable plan and bill of quantities.
- Handover — pass the approved design to Farmland Operate (S3) or the client's own team.

FIELD 07

Service level (SLA)

Gold (cluster).

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Member land data, cluster maps, aggregation plan.

FIELD 10

Technology / platforms

Contour/satellite survey and GIS mapping; CAD/3D layout visualisation; agro-forestry and water-design tools; Nakshatra-tree mapping.

FIELD 11

KPIs & success metrics

Templates adopted, acres designed, diversification.

FIELD 12

Reporting & outputs

Template pack; cluster design summary.

FIELD 13

Commercial model

Enterprise (Cluster) edition · template design fee (subsidised/blended).

FIELD 14

Indicative pricing (INR, ex-GST)

Template design: ₹5,000–12,000/acre (blended/subsidised).

FIELD 15

Timeline & milestones

Survey 1–2 weeks; draft design 2–4 weeks; finalisation after client review — typically 4–8 weeks end-to-end.

FIELD 17

ESG & sustainability outcomes

Scaled biodiversity, water harvesting, smallholder resilience.

FIELD 19

Risks & exclusions

Excludes physical development. A design de-risks but does not guarantee yields or returns; statutory land-use constraints are the client's responsibility (assisted).

FIELD 16

Quality assurance

Design reviewed against water balance, biodiversity and buildability; bill of quantities validated; client sign-off gate before handover.

FIELD 18

Optional add-ons

Custom tweaks, agri-tourism co-op design.

FIELD 20

Compliance & legal

Land-use and setback norms; water-body and rain-water-harvesting norms; applicable local regulations. GST extra.

FIELD 21

Support & escalation

Design account manager; iterative review cycles; documented change requests; escalation matrix.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

“Design every square foot — master planning, water, crop/tree design, biodiversity and the optional Nakshatra Vanam.”

FIELD 01

Purpose & value proposition

Farmland Design Services converts a featureless, barren or under-used holding into a fully-designed, biodiverse, water-secure, revenue-diversified natural farm. Beginning from the site's contours and satellite image, we design the placement of every zone so that water flows where it should and the farm is beautiful as well as productive.

FIELD 02

Target profile & eligibility

Individual small landholders with 5–20 acres seeking an affordable, full-service conversion to natural farming with dependable management and market linkage.

FIELD 03

Objectives (this profile)

A custom yet cost-effective design for a diversified, productive natural farm.

FIELD 04

Scope (included / excluded)

Included: survey, custom design, planting & water plan, BoQ.

Excluded: development (S3).

FIELD 05

Deliverables

- Survey report
- Custom layout + planting scheme
- Water design
- Bill of quantities
- Diversification plan

FIELD 06

Activities & methodology

- Discover — survey the land and understand goals, budget, timeline and (optionally) family Nakshatras.
- Design — master layout, planting scheme, water design and revenue-diversification plan, with visualisations.
- Validate — review with the client, iterate, and finalise a buildable plan and bill of quantities.
- Handover — pass the approved design to Farmland Operate (S3) or the client's own team.

FIELD 07

Service level (SLA)

Gold.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Site access, goals/budget, water data.

FIELD 10

Technology / platforms

Contour/satellite survey and GIS mapping; CAD/3D layout visualisation; agro-forestry and water-design tools; Nakshatra-tree mapping.

FIELD 11

KPIs & success metrics

Design sign-off, diversification, water plan.

FIELD 12

Reporting & outputs

Design dossier.

FIELD 13

Commercial model

Professional edition · fixed-price design fee.

FIELD 14

Indicative pricing (INR, ex-GST)

Design: ₹15,000–30,000/acre (min ₹1.5 lakh).

FIELD 15

Timeline & milestones

Survey 1–2 weeks; draft design 2–4 weeks; finalisation after client review — typically 4–8 weeks end-to-end.

FIELD 17

ESG & sustainability outcomes

Biodiversity, water security, tree cover.

FIELD 19

Risks & exclusions

Excludes physical development. A design de-risks but does not guarantee yields or returns; statutory land-use constraints are the client's responsibility (assisted).

FIELD 21

Support & escalation

Design account manager; iterative review cycles; documented change requests; escalation matrix.

FIELD 16

Quality assurance

Design reviewed against water balance, biodiversity and buildability; bill of quantities validated; client sign-off gate before handover.

FIELD 18

Optional add-ons

Agri-tourism concept, Nakshatra Vanam (lite), drone survey.

FIELD 20

Compliance & legal

Land-use and setback norms; water-body and rain-water-harvesting norms; applicable local regulations. GST extra.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

“Design every square foot — master planning, water, crop/tree design, biodiversity and the optional Nakshatra Vanam.”

FIELD 01

Purpose & value proposition

Farmland Design Services converts a featureless, barren or under-used holding into a fully-designed, biodiverse, water-secure, revenue-diversified natural farm. Beginning from the site's contours and satellite image, we design the placement of every zone so that water flows where it should and the farm is beautiful as well as productive.

FIELD 02

Target profile & eligibility

Small and marginal farmers with under 5 acres, served through group / FPO aggregation and blended finance.

FIELD 03

Objectives (this profile)

An affordable, ready-to-use standard design template for the plot.

FIELD 04

Scope (included / excluded)

Included: standard template design + planting scheme.

Excluded: bespoke survey, full water engineering.

FIELD 05

Deliverables

- Standard plot-design template
- Planting scheme
- Basic water-harvesting layout

FIELD 06

Activities & methodology

- Discover — survey the land and understand goals, budget, timeline and (optionally) family Nakshatras.
- Design — master layout, planting scheme, water design and revenue-diversification plan, with visualisations.
- Validate — review with the client, iterate, and finalise a buildable plan and bill of quantities.
- Handover — pass the approved design to Farmland Operate (S3) or the client's own team.

FIELD 07

Service level (SLA)

Silver.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Plot dimensions, land record.

FIELD 10

Technology / platforms

Contour/satellite survey and GIS mapping; CAD/3D layout visualisation; agro-forestry and water-design tools; Nakshatra-tree mapping.

FIELD 11

KPIs & success metrics

Template adopted, diversification.

FIELD 12

Reporting & outputs

Template sheet.

FIELD 13

Commercial model

Essential edition · low fixed fee (group/subsidised).

**FIELD 14****Indicative pricing (INR, ex-GST)**

Template design: ₹8,000–15,000/acre OR flat ₹40,000–75,000/plot. Subsidy reduces net cost.

**FIELD 15****Timeline & milestones**

Survey 1–2 weeks; draft design 2–4 weeks; finalisation after client review — typically 4–8 weeks end-to-end.

**FIELD 16****Quality assurance**

Design reviewed against water balance, biodiversity and buildability; bill of quantities validated; client sign-off gate before handover.

**FIELD 17****ESG & sustainability outcomes**

Biodiversity, water harvesting on small plots.

**FIELD 18****Optional add-ons**

Group agri-tourism design, certification-ready layout.

**FIELD 19****Risks & exclusions**

Excludes physical development. A design de-risks but does not guarantee yields or returns; statutory land-use constraints are the client's responsibility (assisted).

**FIELD 20****Compliance & legal**

Land-use and setback norms; water-body and rain-water-harvesting norms; applicable local regulations. GST extra.

**FIELD 21****Support & escalation**

Design account manager; iterative review cycles; documented change requests; escalation matrix.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Farmland Operate Services

Brand name: *Sanjeevani™ · FOS*

Develop, plant and run the farm day-to-day — infrastructure, mechanisation, husbandry and skilled supervision.

Individuals / NRIs / Family Foundations
20+ acres

Corporates & PSUs
barren / degraded land, 100+ acres,
ESG mandate

FPOs / Village-level Organisations
aggregated member farms

Small Landholders
5–20 acres

Small & Marginal Holders
< 5 acres

Farmland Operate Services (Sanjeevani™)

Client profile P1 · Individuals / NRIs / Family Foundations (20+ acres)

P1 / 5

“Develop, plant, operate, manage and market the farm end-to-end — so the owner never has to become a farmer.”

FIELD 01

Purpose & value proposition

Farmland Operate Services takes complete responsibility for building and running the farm across two phases: a six-month Design-and-Development build, and a long Regular-Operations phase, anchored by the Agri-Operations-Centre and delivered by trained ex-servicemen supervisors. It turns a design on restored soil into a living, producing, income-generating farm — and keeps it that way.

FIELD 02

Target profile & eligibility

Individual, NRI or family-foundation owners with a landholding of 20 acres or more, seeking a managed, high-value natural farm and a multi-generational legacy / wellness asset.

FIELD 03

Objectives (this profile)

A fully developed, professionally-run farm delivering year-round produce, appreciating tree assets and transparent reporting — hands-off for the owner.

FIELD 04

Scope (included / excluded)

Included: development build + full operation, supervision, inputs, marketing, per-plot reporting.

Excluded: land purchase; guaranteed prices.

FIELD 05

Deliverables

- Developed, planted farm
- Dedicated ex-servicemen supervisor
- Full operations & management
- Nursery/input supply
- Monthly per-plot reports
- Produce marketing

FIELD 06

Activities & methodology

- Develop — build shared infrastructure and prepare and plant each plot to the design (~6 months).
- Operate — run the farm through the AOC and on-site ex-servicemen supervisors; employ and train local labour.
- Monetise — aggregate, brand and sell produce; run agri-tourism/events; capture carbon and ESG outcomes.
- Report — monthly, online, per-plot reporting to each client.
- Improve — continuous innovation in mechanisation, data and market linkages across the farm network.

FIELD 07

Service level (SLA)

Platinum — resident/weekly supervision, same-day response.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Land, access, water/power, approvals, working-capital agreement.

FIELD 10

Technology / platforms

Central biochar/compost/nursery unit; rain-water harvesting; EV micro-mechanisation; drones and safety cameras; per-plot app and AOC dashboard.

FIELD 11

KPIs & success metrics

Yield/acre, profitability, produce sold, cost/acre, uptime.

FIELD 12

Reporting & outputs

Monthly dashboard; quarterly review; annual P&L.

**FIELD 13****Commercial model**

Premier edition · fixed-price development + managed-service subscription and/or revenue-share.

**FIELD 14****Indicative pricing (INR, ex-GST)**

Development: ₹5–10 lakh/acre. Operate: ₹55,000–85,000/acre/yr OR 20–25% revenue-share. Inputs at cost +15–20%.

**FIELD 15****Timeline & milestones**

Development phase ~6 months; regular operations typically 8 years; system stabilises over ~3 years.

**FIELD 16****Quality assurance**

SOP-driven operations; defined planting and maintenance standards; per-plot monitoring; monthly review and corrective action.

**FIELD 17****ESG & sustainability outcomes**

Tree cover, water conservation, rural jobs, healthy produce.

**FIELD 18****Optional add-ons**

Agri-tourism operation, carbon monetisation, eco-stay management.

**FIELD 19****Risks & exclusions**

Excludes land purchase and price guarantees. Requires clear working-capital arrangement; operational outcomes depend on agreed inputs and access.

**FIELD 20****Compliance & legal**

Labour and safety norms; agri-input and produce-handling norms; applicable environmental and land laws. GST extra.

**FIELD 21****Support & escalation**

On-site supervisor + account manager; documented change requests; escalation matrix; monthly/quarterly reviews.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Farmland Operate Services (Sanjeevani™)

P2 / 5

Client profile P2 · Corporates & PSUs (barren / degraded land, 100+ acres, ESG mandate)

“Develop, plant, operate, manage and market the farm end-to-end — so the owner never has to become a farmer.”

FIELD 01

Purpose & value proposition

Farmland Operate Services takes complete responsibility for building and running the farm across two phases: a six-month Design-and-Development build, and a long Regular-Operations phase, anchored by the Agri-Operations-Centre and delivered by trained ex-servicemen supervisors. It turns a design on restored soil into a living, producing, income-generating farm — and keeps it that way.

FIELD 02

Target profile & eligibility

Corporates and PSUs (e.g., cement, steel, power) holding 100+ acres of barren, unused or degraded land, with an ESG / CSR and net-zero mandate.

FIELD 03

Objectives (this profile)

Turnkey development and operation of large land, with an option to transfer a running farm; ESG-grade delivery and governance.

FIELD 04

Scope (included / excluded)

Included: large-scale development + operation, MRV, ESG reporting, governance; BOOT option.

Excluded: client disclosures (data supplied).

FIELD 05

Deliverables

- Large-scale developed farm
- Professional operations at scale
- Employment (ESM, women SHG, youth)
- ESG & carbon reporting
- Produce off-take
- Optional transfer of running farm

FIELD 06

Activities & methodology

- Develop — build shared infrastructure and prepare and plant each plot to the design (~6 months).
- Operate — run the farm through the AOC and on-site ex-servicemen supervisors; employ and train local labour.
- Monetise — aggregate, brand and sell produce; run agri-tourism/events; capture carbon and ESG outcomes.
- Report — monthly, online, per-plot reporting to each client.
- Improve — continuous innovation in mechanisation, data and market linkages across the farm network.

FIELD 07

Service level (SLA)

Platinum + steering committee; SLA-linked outcomes.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Land, clearances, budget, MoU, SPOC, security access.

FIELD 10

Technology / platforms

Central biochar/compost/nursery unit; rain-water harvesting; EV micro-mechanisation; drones and safety cameras; per-plot app and AOC dashboard.

FIELD 11

KPIs & success metrics

Acres operational, yield, jobs, tCO2e, ROI, ESG contribution.

FIELD 12

Reporting & outputs

Monthly ops; QBR; annual audited ESG report.

FIELD 13

Commercial model

Enterprise edition · BOOT or outcome-based managed service; optional GF co-investment.

FIELD 14

Indicative pricing (INR, ex-GST)

Development: ₹2–5 lakh/acre. Operate: ₹30,000–60,000/acre/yr or outcome-based. BOOT: GF co-invest for a larger revenue share (30–50%) over the term.

FIELD 15

Timeline & milestones

Development phase ~6 months; regular operations typically 8 years; system stabilises over ~3 years.

FIELD 16

Quality assurance

SOP-driven operations; defined planting and maintenance standards; per-plot monitoring; monthly review and corrective action.

FIELD 17

ESG & sustainability outcomes

Scaled restoration, livelihoods, carbon, water.

FIELD 18

Optional add-ons

Carbon credits, employee CSR programmes, timber/agro-forestry.

FIELD 19

Risks & exclusions

Excludes land purchase and price guarantees. Requires clear working-capital arrangement; operational outcomes depend on agreed inputs and access.

FIELD 20

Compliance & legal

Labour and safety norms; agri-input and produce-handling norms; applicable environmental and land laws. GST extra.

FIELD 21

Support & escalation

On-site supervisor + account manager; documented change requests; escalation matrix; monthly/quarterly reviews.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Farmland Operate Services (*Sanjeevani*TM)

P3 / 5

Client profile P3 · FPOs / Village-level Organisations (aggregated member farms)

“Develop, plant, operate, manage and market the farm end-to-end — so the owner never has to become a farmer.”

FIELD 01

Purpose & value proposition

Farmland Operate Services takes complete responsibility for building and running the farm across two phases: a six-month Design-and-Development build, and a long Regular-Operations phase, anchored by the Agri-Operations-Centre and delivered by trained ex-servicemen supervisors. It turns a design on restored soil into a living, producing, income-generating farm — and keeps it that way.

FIELD 02

Target profile & eligibility

Registered Farmer Producer Organisations or village-level organisations aggregating multiple small and marginal member farms into a cluster.

FIELD 03

Objectives (this profile)

Cluster-level operational support and training so members can run productive natural farms with shared resources.

FIELD 04

Scope (included / excluded)

Included: shared development support, cluster operations, training, input supply, marketing.

Excluded: individual dedicated supervision.

FIELD 05

Deliverables

- Shared development support
- Cluster operations & supervision
- Farmer training & events
- Input/nursery supply
- Aggregated marketing

FIELD 06

Activities & methodology

- Develop — build shared infrastructure and prepare and plant each plot to the design (~6 months).
- Operate — run the farm through the AOC and on-site ex-servicemen supervisors; employ and train local labour.
- Monetise — aggregate, brand and sell produce; run agri-tourism/events; capture carbon and ESG outcomes.
- Report — monthly, online, per-plot reporting to each client.
- Improve — continuous innovation in mechanisation, data and market linkages across the farm network.

FIELD 07

Service level (SLA)

Gold (cluster) with shared supervisor.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

FPO & member data, shared infra, co-investment.

FIELD 10

Technology / platforms

Central biochar/compost/nursery unit; rain-water harvesting; EV micro-mechanisation; drones and safety cameras; per-plot app and AOC dashboard.

FIELD 11

KPIs & success metrics

Acres operational, yield uplift, cost saving, member income.

FIELD 12

Reporting & outputs

Monthly cluster dashboard; season report.

FIELD 13

Commercial model

Enterprise (Cluster) edition · blended finance + revenue-share.

FIELD 14

Indicative pricing (INR, ex-GST)

Operate: ₹20,000–35,000/acre/yr + 5–10% revenue-share (subsidised via blended finance). Development via NABARD/CSR.

FIELD 15

Timeline & milestones

Development phase ~6 months; regular operations typically 8 years; system stabilises over ~3 years.

FIELD 16

Quality assurance

SOP-driven operations; defined planting and maintenance standards; per-plot monitoring; monthly review and corrective action.

FIELD 17

ESG & sustainability outcomes

Smallholder livelihoods, women/youth jobs, soil/water.

FIELD 18

Optional add-ons

Processing units, export operations, carbon aggregation.

FIELD 19

Risks & exclusions

Excludes land purchase and price guarantees. Requires clear working-capital arrangement; operational outcomes depend on agreed inputs and access.

FIELD 20

Compliance & legal

Labour and safety norms; agri-input and produce-handling norms; applicable environmental and land laws. GST extra.

FIELD 21

Support & escalation

On-site supervisor + account manager; documented change requests; escalation matrix; monthly/quarterly reviews.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Farmland Operate Services (Sanjeevani™)

Client profile P4 · Small Landholders (5–20 acres)

P4 / 5

“Develop, plant, operate, manage and market the farm end-to-end — so the owner never has to become a farmer.”

FIELD 01

Purpose & value proposition

Farmland Operate Services takes complete responsibility for building and running the farm across two phases: a six-month Design-and-Development build, and a long Regular-Operations phase, anchored by the Agri-Operations-Centre and delivered by trained ex-servicemen supervisors. It turns a design on restored soil into a living, producing, income-generating farm — and keeps it that way.

FIELD 02

Target profile & eligibility

Individual small landholders with 5–20 acres seeking an affordable, full-service conversion to natural farming with dependable management and market linkage.

FIELD 03

Objectives (this profile)

Dependable, affordable development and managed operation of a diversified natural farm.

FIELD 04

Scope (included / excluded)

Included: development + managed operation, inputs, marketing, reporting.

Excluded: land purchase; guarantees.

FIELD 05

Deliverables

- Developed, planted farm
- Managed operations & supervision
- Input/nursery supply
- Monthly reports
- Produce marketing

FIELD 06

Activities & methodology

- Develop — build shared infrastructure and prepare and plant each plot to the design (~6 months).
- Operate — run the farm through the AOC and on-site ex-servicemen supervisors; employ and train local labour.
- Monetise — aggregate, brand and sell produce; run agri-tourism/events; capture carbon and ESG outcomes.
- Report — monthly, online, per-plot reporting to each client.
- Improve — continuous innovation in mechanisation, data and market linkages across the farm network.

FIELD 07

Service level (SLA)

Gold (fortnightly).

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Land, access, water, working-capital/loan.

FIELD 10

Technology / platforms

Central biochar/compost/nursery unit; rain-water harvesting; EV micro-mechanisation; drones and safety cameras; per-plot app and AOC dashboard.

FIELD 11

KPIs & success metrics

Yield/acre, profitability, cost saving, produce sold.

FIELD 12

Reporting & outputs

Monthly dashboard; quarterly review.

FIELD 13

Commercial model

Professional edition · fixed-price development + managed-service subscription.

FIELD 14

Indicative pricing (INR, ex-GST)

Development: ₹3–7 lakh/acre. Operate: ₹40,000–65,000/acre/yr OR 15–20% revenue-share. EMI options.

FIELD 15

Timeline & milestones

Development phase ~6 months; regular operations typically 8 years; system stabilises over ~3 years.

FIELD 16

Quality assurance

SOP-driven operations; defined planting and maintenance standards; per-plot monitoring; monthly review and corrective action.

FIELD 17

ESG & sustainability outcomes

Tree cover, water, family livelihood.

FIELD 18

Optional add-ons

Agri-tourism, carbon, certification.

FIELD 19

Risks & exclusions

Excludes land purchase and price guarantees. Requires clear working-capital arrangement; operational outcomes depend on agreed inputs and access.

FIELD 20

Compliance & legal

Labour and safety norms; agri-input and produce-handling norms; applicable environmental and land laws. GST extra.

FIELD 21

Support & escalation

On-site supervisor + account manager; documented change requests; escalation matrix; monthly/quarterly reviews.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Farmland Operate Services (Sanjeevani™)

Client profile P5 · Small & Marginal Holders (< 5 acres)

P5 / 5

“Develop, plant, operate, manage and market the farm end-to-end — so the owner never has to become a farmer.”

FIELD 01

Purpose & value proposition

Farmland Operate Services takes complete responsibility for building and running the farm across two phases: a six-month Design-and-Development build, and a long Regular-Operations phase, anchored by the Agri-Operations-Centre and delivered by trained ex-servicemen supervisors. It turns a design on restored soil into a living, producing, income-generating farm — and keeps it that way.

FIELD 02

Target profile & eligibility

Small and marginal farmers with under 5 acres, served through group / FPO aggregation and blended finance.

FIELD 03

Objectives (this profile)

Low-cost operational support through shared supervision and group services.

FIELD 04

Scope (included / excluded)

Included: shared-supervisor operations, input supply, group marketing.

Excluded: full development build; dedicated supervisor.

FIELD 05

Deliverables

- Shared-supervisor operations
- Group input/nursery supply
- App advisories
- Group produce marketing

FIELD 06

Activities & methodology

- Develop — build shared infrastructure and prepare and plant each plot to the design (~6 months).
- Operate — run the farm through the AOC and on-site ex-servicemen supervisors; employ and train local labour.
- Monetise — aggregate, brand and sell produce; run agri-tourism/events; capture carbon and ESG outcomes.
- Report — monthly, online, per-plot reporting to each client.
- Improve — continuous innovation in mechanisation, data and market linkages across the farm network.

FIELD 07

Service level (SLA)

Silver (monthly group).

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Land record, group membership, co-payment.

FIELD 10

Technology / platforms

Central biochar/compost/nursery unit; rain-water harvesting; EV micro-mechanisation; drones and safety cameras; per-plot app and AOC dashboard.

FIELD 11

KPIs & success metrics

Yield uplift, cost saving, income increase.

FIELD 12

Reporting & outputs

App advisories; quarterly group report.

FIELD 13

Commercial model

Essential edition · group-delivered; blended finance; low fee + commission.

FIELD 14

Indicative pricing (INR, ex-GST)

Operate: ₹25,000–40,000/acre/yr (group). Light development from ₹1–3 lakh/acre. CSR/subsidy reduces net cost.

FIELD 15

Timeline & milestones

Development phase ~6 months; regular operations typically 8 years; system stabilises over ~3 years.

FIELD 16

Quality assurance

SOP-driven operations; defined planting and maintenance standards; per-plot monitoring; monthly review and corrective action.

FIELD 17

ESG & sustainability outcomes

Inclusive livelihood, soil/water, tree cover.

FIELD 18

Optional add-ons

Short-format agri-tourism co-op, micro-processing.

FIELD 19

Risks & exclusions

Excludes land purchase and price guarantees. Requires clear working-capital arrangement; operational outcomes depend on agreed inputs and access.

FIELD 20

Compliance & legal

Labour and safety norms; agri-input and produce-handling norms; applicable environmental and land laws. GST extra.

FIELD 21

Support & escalation

On-site supervisor + account manager; documented change requests; escalation matrix; monthly/quarterly reviews.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Agri-Operations Centre

AOC Service

The digital nerve-centre — monitoring, reporting, analytics and per-plot dashboards for farmland operations.

Individuals / NRIs / Family Foundations
20+ acres

Corporates & PSUs
barren / degraded land, 100+ acres,
ESG mandate

FPOs / Village-level Organisations
aggregated member farms

Small Landholders
5–20 acres

Small & Marginal Holders
< 5 acres

Agri-Operations Centre

Client profile P1 · Individuals / NRIs / Family Foundations (20+ acres)

P1 / 5

“The digital nerve-centre — monitoring, reporting, analytics and per-plot dashboards for farmland operations.”

**FIELD 01****Purpose & value proposition**

The Agri-Operations-Centre is the central hub of knowledge, oversight and data that makes Gratitude Farms scalable and replicable. As a service, it provides monitoring, reporting and analytics for a client's farmland — drone and IoT data capture, per-plot dashboards, agronomy advisories and carbon/ESG MRV — whether or not Gratitude Farms operates the farm. It is offered as a technology subscription ('Farm-monitoring-as-a-Service').

**FIELD 02****Target profile & eligibility**

Individual, NRI or family-foundation owners with a landholding of 20 acres or more, seeking a managed, high-value natural farm and a multi-generational legacy / wellness asset.

**FIELD 03****Objectives (this profile)**

Full visibility of the farm from anywhere — per-plot dashboards, imagery and monthly reports.

**FIELD 04****Scope (included / excluded)**

Included: full dashboard, monthly reports, drone imagery, advisories.

Excluded: physical operations (S3).

**FIELD 05****Deliverables**

- Per-plot dashboard + app
- Monthly monitoring reports
- Periodic drone imagery
- Alerts & advisories

**FIELD 06****Activities & methodology**

- Deploy — onboard the site; set up dashboards, app access and (as subscribed) drones/sensors.
- Monitor — capture drone/IoT/field data on a defined cadence.
- Analyse — generate analytics, alerts, advisories and anomaly detection.
- Report — deliver dashboards and periodic reports (operations, soil, yield, ESG/carbon).

**FIELD 07****Service level (SLA)**

Gold — monthly reporting, dashboard uptime target.

**FIELD 08****Roles & responsibilities**

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

**FIELD 09****Client inputs required**

Farm/plot data, access for drone/sensor deployment.

**FIELD 10****Technology / platforms**

Cloud dashboard and mobile app; drone imagery and analytics; IoT/weather sensors; carbon/ESG MRV engine; APIs for enterprise integration.

**FIELD 11****KPIs & success metrics**

Coverage, report timeliness, uptime, insights used.

**FIELD 12****Reporting & outputs**

Monthly dashboard + quarterly review.

FIELD 13

Commercial model

Gold edition · per-acre annual subscription + one-time setup.

FIELD 14

Indicative pricing (INR, ex-GST)

Subscription: ₹2,500–4,000/acre/yr. Setup: ₹25,000–50,000. Drone: ₹500–1,500/acre/cycle.

FIELD 15

Timeline & milestones

Onboarding 1–3 weeks; first reports within the first month; ongoing subscription (annual, renewable).

FIELD 16

Quality assurance

Defined data-coverage, report-timeliness and dashboard-uptime targets; data-quality checks; (enterprise) audit-ready MRV.

FIELD 17

ESG & sustainability outcomes

Data-backed carbon/biodiversity tracking.

FIELD 18

Optional add-ons

Extra drone cycles, carbon MRV, weather/IoT sensors.

FIELD 19

Risks & exclusions

Data quality depends on client-provided access and connectivity; monitoring does not itself perform field operations (that is S3).

FIELD 20

Compliance & legal

Data-privacy and data-ownership terms; carbon/ESG-standard alignment for MRV outputs. GST extra.

FIELD 21

Support & escalation

Helpdesk (per SLA tier); dashboard uptime commitment; documented change requests; escalation matrix.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

“The digital nerve-centre — monitoring, reporting, analytics and per-plot dashboards for farmland operations.”

FIELD 01

Purpose & value proposition

The Agri-Operations-Centre is the central hub of knowledge, oversight and data that makes Gratitude Farms scalable and replicable. As a service, it provides monitoring, reporting and analytics for a client's farmland — drone and IoT data capture, per-plot dashboards, agronomy advisories and carbon/ESG MRV — whether or not Gratitude Farms operates the farm. It is offered as a technology subscription ('Farm-monitoring-as-a-Service').

FIELD 02

Target profile & eligibility

Corporates and PSUs (e.g., cement, steel, power) holding 100+ acres of barren, unused or degraded land, with an ESG / CSR and net-zero mandate.

FIELD 03

Objectives (this profile)

An enterprise-grade platform delivering auditable ESG, carbon and operational analytics across large/multiple sites, with API integration.

FIELD 04

Scope (included / excluded)

Included: enterprise platform licence, full analytics, API, ESG/carbon MRV, audited reports.

Excluded: none for monitoring scope.

FIELD 05

Deliverables

- Enterprise analytics platform + API
- Multi-site dashboards
- ESG & carbon MRV reports (audited)
- Board-ready analytics packs
- Alerts & anomaly detection

FIELD 06

Activities & methodology

- Deploy — onboard the site; set up dashboards, app access and (as subscribed) drones/sensors.
- Monitor — capture drone/IoT/field data on a defined cadence.
- Analyse — generate analytics, alerts, advisories and anomaly detection.
- Report — deliver dashboards and periodic reports (operations, soil, yield, ESG/carbon).

FIELD 07

Service level (SLA)

Platinum — real-time dashboard, defined uptime, dedicated support.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Site data, IT/API integration access, ESG framework, SPOC.

FIELD 10

Technology / platforms

Cloud dashboard and mobile app; drone imagery and analytics; IoT/weather sensors; carbon/ESG MRV engine; APIs for enterprise integration.

FIELD 11

KPIs & success metrics

Uptime, data coverage, MRV accuracy, ESG-report timeliness.

FIELD 12

Reporting & outputs

Real-time dashboard + monthly + annual audited ESG/carbon report.

FIELD 13

Commercial model

Enterprise edition · annual platform licence + per-acre fee; optionally outcome/ESG-linked.

FIELD 14

Indicative pricing (INR, ex-GST)

Platform licence: ₹8–25 lakh/yr + ₹1,500–3,000/acre/yr. Setup/integration: ₹2–8 lakh. Drone: ₹500–1,200/acre/cycle.

FIELD 15

Timeline & milestones

Onboarding 1–3 weeks; first reports within the first month; ongoing subscription (annual, renewable).

FIELD 16

Quality assurance

Defined data-coverage, report-timeliness and dashboard-uptime targets; data-quality checks; (enterprise) audit-ready MRV.

FIELD 17

ESG & sustainability outcomes

Auditable carbon, biodiversity, water & livelihood metrics (BRSR/GRI/SDG).

FIELD 18

Optional add-ons

Third-party audit, satellite MRV, integration with client ESG systems.

FIELD 19

Risks & exclusions

Data quality depends on client-provided access and connectivity; monitoring does not itself perform field operations (that is S3).

FIELD 20

Compliance & legal

Data-privacy and data-ownership terms; carbon/ESG-standard alignment for MRV outputs. GST extra.

FIELD 21

Support & escalation

Helpdesk (per SLA tier); dashboard uptime commitment; documented change requests; escalation matrix.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Agri-Operations Centre

Client profile P3 · FPOs / Village-level Organisations (aggregated member farms)

P3 / 5

“The digital nerve-centre — monitoring, reporting, analytics and per-plot dashboards for farmland operations.”

**FIELD 01****Purpose & value proposition**

The Agri-Operations-Centre is the central hub of knowledge, oversight and data that makes Gratitude Farms scalable and replicable. As a service, it provides monitoring, reporting and analytics for a client's farmland — drone and IoT data capture, per-plot dashboards, agronomy advisories and carbon/ESG MRV — whether or not Gratitude Farms operates the farm. It is offered as a technology subscription ('Farm-monitoring-as-a-Service').

**FIELD 02****Target profile & eligibility**

Registered Farmer Producer Organisations or village-level organisations aggregating multiple small and marginal member farms into a cluster.

**FIELD 03****Objectives (this profile)**

A shared, low-cost cluster dashboard for monitoring member farms and aggregating carbon data.

**FIELD 04****Scope (included / excluded)**

Included: shared cluster dashboard, group reports, carbon aggregation data.

Excluded: per-member bespoke analytics.

**FIELD 05****Deliverables**

- Shared cluster dashboard
- Group monitoring reports
- Carbon-aggregation data
- Advisory alerts

**FIELD 06****Activities & methodology**

- Deploy — onboard the site; set up dashboards, app access and (as subscribed) drones/sensors.
- Monitor — capture drone/IoT/field data on a defined cadence.
- Analyse — generate analytics, alerts, advisories and anomaly detection.
- Report — deliver dashboards and periodic reports (operations, soil, yield, ESG/carbon).

**FIELD 07****Service level (SLA)**

Gold (cluster).

**FIELD 08****Roles & responsibilities**

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

**FIELD 09****Client inputs required**

Member/plot data, cluster maps.

**FIELD 10****Technology / platforms**

Cloud dashboard and mobile app; drone imagery and analytics; IoT/weather sensors; carbon/ESG MRV engine; APIs for enterprise integration.

**FIELD 11****KPIs & success metrics**

Coverage, report timeliness, data for credits.

**FIELD 12****Reporting & outputs**

Monthly cluster dashboard; season report.

FIELD 13

Commercial model

Enterprise (Cluster) edition · shared subscription (blended/subsidised).

FIELD 14

Indicative pricing (INR, ex-GST)

Shared subscription: ₹1,000–2,000/acre/yr (subsidised). Setup via blended finance.

FIELD 15

Timeline & milestones

Onboarding 1–3 weeks; first reports within the first month; ongoing subscription (annual, renewable).

FIELD 16

Quality assurance

Defined data-coverage, report-timeliness and dashboard-uptime targets; data-quality checks; (enterprise) audit-ready MRV.

FIELD 17

ESG & sustainability outcomes

Cluster carbon & biodiversity data.

FIELD 18

Optional add-ons

Export-traceability, GI/organic data.

FIELD 19

Risks & exclusions

Data quality depends on client-provided access and connectivity; monitoring does not itself perform field operations (that is S3).

FIELD 20

Compliance & legal

Data-privacy and data-ownership terms; carbon/ESG-standard alignment for MRV outputs. GST extra.

FIELD 21

Support & escalation

Helpdesk (per SLA tier); dashboard uptime commitment; documented change requests; escalation matrix.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Agri-Operations Centre

Client profile P4 · Small Landholders (5–20 acres)

P4 / 5

“The digital nerve-centre — monitoring, reporting, analytics and per-plot dashboards for farmland operations.”

FIELD 01

Purpose & value proposition

The Agri-Operations-Centre is the central hub of knowledge, oversight and data that makes Gratitude Farms scalable and replicable. As a service, it provides monitoring, reporting and analytics for a client's farmland — drone and IoT data capture, per-plot dashboards, agronomy advisories and carbon/ESG MRV — whether or not Gratitude Farms operates the farm. It is offered as a technology subscription ('Farm-monitoring-as-a-Service').

FIELD 02

Target profile & eligibility

Individual small landholders with 5–20 acres seeking an affordable, full-service conversion to natural farming with dependable management and market linkage.

FIELD 03

Objectives (this profile)

An affordable dashboard and reports to track soil, yield and operations.

FIELD 04

Scope (included / excluded)

Included: dashboard, periodic reports, advisories.

Excluded: enterprise API/ESG.

FIELD 05

Deliverables

- Dashboard + app
- Periodic reports
- Advisories & alerts

FIELD 06

Activities & methodology

- Deploy — onboard the site; set up dashboards, app access and (as subscribed) drones/sensors.
- Monitor — capture drone/IoT/field data on a defined cadence.
- Analyse — generate analytics, alerts, advisories and anomaly detection.
- Report — deliver dashboards and periodic reports (operations, soil, yield, ESG/carbon).

FIELD 07

Service level (SLA)

Gold (monthly).

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Farm/plot data, access.

FIELD 10

Technology / platforms

Cloud dashboard and mobile app; drone imagery and analytics; IoT/weather sensors; carbon/ESG MRV engine; APIs for enterprise integration.

FIELD 11

KPIs & success metrics

Coverage, timeliness, insights used.

FIELD 12

Reporting & outputs

Monthly/quarterly reports.

FIELD 13

Commercial model

Gold/Silver edition · per-acre annual subscription.

FIELD 14

Indicative pricing (INR, ex-GST)

Subscription: ₹2,000–3,000/acre/yr. Setup: ₹10,000–25,000. Drone: ₹500–1,500/acre/cycle.

FIELD 15

Timeline & milestones

Onboarding 1–3 weeks; first reports within the first month; ongoing subscription (annual, renewable).

FIELD 16

Quality assurance

Defined data-coverage, report-timeliness and dashboard-uptime targets; data-quality checks; (enterprise) audit-ready MRV.

FIELD 17

ESG & sustainability outcomes

Basic carbon/biodiversity tracking.

FIELD 18

Optional add-ons

Drone cycles, sensors.

FIELD 19

Risks & exclusions

Data quality depends on client-provided access and connectivity; monitoring does not itself perform field operations (that is S3).

FIELD 20

Compliance & legal

Data-privacy and data-ownership terms; carbon/ESG-standard alignment for MRV outputs. GST extra.

FIELD 21

Support & escalation

Helpdesk (per SLA tier); dashboard uptime commitment; documented change requests; escalation matrix.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

“The digital nerve-centre — monitoring, reporting, analytics and per-plot dashboards for farmland operations.”

FIELD 01

Purpose & value proposition

The Agri-Operations-Centre is the central hub of knowledge, oversight and data that makes Gratitude Farms scalable and replicable. As a service, it provides monitoring, reporting and analytics for a client's farmland — drone and IoT data capture, per-plot dashboards, agronomy advisories and carbon/ESG MRV — whether or not Gratitude Farms operates the farm. It is offered as a technology subscription ('Farm-monitoring-as-a-Service').

FIELD 02

Target profile & eligibility

Small and marginal farmers with under 5 acres, served through group / FPO aggregation and blended finance.

FIELD 03

Objectives (this profile)

A simple mobile app with advisories and basic per-plot tracking.

FIELD 04

Scope (included / excluded)

Included: mobile app, advisories, basic plot view.

Excluded: drone/IoT unless group-funded.

FIELD 05

Deliverables

- Mobile app (advisories)
- Basic plot tracking
- Group alerts

FIELD 06

Activities & methodology

- Deploy — onboard the site; set up dashboards, app access and (as subscribed) drones/sensors.
- Monitor — capture drone/IoT/field data on a defined cadence.
- Analyse — generate analytics, alerts, advisories and anomaly detection.
- Report — deliver dashboards and periodic reports (operations, soil, yield, ESG/carbon).

FIELD 07

Service level (SLA)

Silver.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Plot data, smartphone/group access.

FIELD 10

Technology / platforms

Cloud dashboard and mobile app; drone imagery and analytics; IoT/weather sensors; carbon/ESG MRV engine; APIs for enterprise integration.

FIELD 11

KPIs & success metrics

Adoption, advisory usage, yield tracking.

FIELD 12

Reporting & outputs

In-app advisories; quarterly group report.

FIELD 13

Commercial model

Essential edition · per-plot app subscription (group/subsidised).

FIELD 14

Indicative pricing (INR, ex-GST)

App: ₹3,000–6,000/plot/yr OR ₹1,000–1,800/acre/yr (group). CSR/subsidy reduces net cost.

FIELD 15

Timeline & milestones

Onboarding 1–3 weeks; first reports within the first month; ongoing subscription (annual, renewable).

FIELD 16

Quality assurance

Defined data-coverage, report-timeliness and dashboard-uptime targets; data-quality checks; (enterprise) audit-ready MRV.

FIELD 17

ESG & sustainability outcomes

Inclusive digital access, data for cluster carbon.

FIELD 18

Optional add-ons

Shared drone cycles, cluster analytics.

FIELD 19

Risks & exclusions

Data quality depends on client-provided access and connectivity; monitoring does not itself perform field operations (that is S3).

FIELD 20

Compliance & legal

Data-privacy and data-ownership terms; carbon/ESG-standard alignment for MRV outputs. GST extra.

FIELD 21

Support & escalation

Helpdesk (per SLA tier); dashboard uptime commitment; documented change requests; escalation matrix.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Market Linkage Facilitation

incl. Exports

Aggregate, brand, certify and sell the produce — domestic and export — capturing premium realisation for the grower.

Individuals / NRIs / Family Foundations
20+ acres

Corporates & PSUs
barren / degraded land, 100+ acres,
ESG mandate

FPOs / Village-level Organisations
aggregated member farms

Small Landholders
5–20 acres

Small & Marginal Holders
< 5 acres

Market Linkage Facilitation

Client profile P1 · Individuals / NRIs / Family Foundations (20+ acres)

P1 / 5

“Aggregate, brand, certify and sell the produce — domestic and export — capturing premium realisation for the grower.”

FIELD 01

Purpose & value proposition

Market Linkage Facilitation ensures the value created on the farm reaches the grower's pocket. It aggregates, grades, brands and sells produce through the right channels — local, retail, e-commerce and export — and facilitates certification, buyers, logistics and compliance, so growers realise premium prices rather than losing value to intermediaries.

FIELD 02

Target profile & eligibility

Individual, NRI or family-foundation owners with a landholding of 20 acres or more, seeking a managed, high-value natural farm and a multi-generational legacy / wellness asset.

FIELD 03

Objectives (this profile)

Convert estate produce into a premium brand with concierge sales and the best realisation.

FIELD 04

Scope (included / excluded)

Included: branding, premium channel sales, certification facilitation, realisation reporting.

Excluded: guaranteed prices.

FIELD 05

Deliverables

- Produce brand & packaging
- Premium-channel sales (retail/HoReCa/e-com)
- Certification facilitation
- Realisation reports

FIELD 06

Activities & methodology

- Aggregate — collect, grade and sort produce (individual or cluster).
- Brand & certify — packaging, branding and organic/GI certification facilitation.
- Sell — domestic channels (retail, HoReCa, e-commerce) and export facilitation (buyers, logistics, compliance).
- Report — price discovery, realisation and sales reporting.

FIELD 07

Service level (SLA)

Gold — dedicated linkage manager.

FIELD 08

Roles & responsibilities

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

FIELD 09

Client inputs required

Produce volumes/quality, brand preferences.

FIELD 10

Technology / platforms

Aggregation and traceability system; produce grading; e-commerce/D2C storefront; export-documentation and compliance tools; price-discovery data.

FIELD 11

KPIs & success metrics

Price realisation, volume sold, premium captured, repeat buyers.

FIELD 12

Reporting & outputs

Monthly sales & realisation report.

FIELD 13

Commercial model

Premium edition · commission on sales (+ optional brand-build fee).

FIELD 14

Indicative pricing (INR, ex-GST)

Commission: 8–12% of realised sales. Optional brand-build: ₹1–5 lakh. Certification facilitation: ₹1–3 lakh.

FIELD 15

Timeline & milestones

Onboarding and branding 3–6 weeks; sales from the first harvest cycle; export facilitation project-based.

FIELD 16

Quality assurance

Grading and quality standards; traceability; buyer-contract management; realisation benchmarked vs mandi prices.

FIELD 17

ESG & sustainability outcomes

Traceable, chemical-free premium produce.

FIELD 18

Optional add-ons

Export, organic/GI certification, D2C storefront, carbon-branded produce.

FIELD 19

Risks & exclusions

Excludes price guarantees; realisation depends on quality, volume and market conditions; export subject to buyer and regulatory acceptance.

FIELD 20

Compliance & legal

Food-safety, labelling, organic/GI and export/FSSAI/APEDA norms; contract and payment terms. GST extra.

FIELD 21

Support & escalation

Linkage/account manager; documented change requests; escalation matrix; monthly sales review.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Market Linkage Facilitation

P2 / 5

Client profile P2 · Corporates & PSUs (barren / degraded land, 100+ acres, ESG mandate)

“Aggregate, brand, certify and sell the produce — domestic and export — capturing premium realisation for the grower.”

**FIELD 01****Purpose & value proposition**

Market Linkage Facilitation ensures the value created on the farm reaches the grower's pocket. It aggregates, grades, brands and sells produce through the right channels — local, retail, e-commerce and export — and facilitates certification, buyers, logistics and compliance, so growers realise premium prices rather than losing value to intermediaries.

**FIELD 02****Target profile & eligibility**

Corporates and PSUs (e.g., cement, steel, power) holding 100+ acres of barren, unused or degraded land, with an ESG / CSR and net-zero mandate.

**FIELD 03****Objectives (this profile)**

Bulk off-take and ESG-branded produce channels, with advisory on market and carbon-linked positioning.

**FIELD 04****Scope (included / excluded)**

Included: bulk off-take facilitation, ESG/‘restored-land’ branding, export, market advisory.

Excluded: price guarantees.

**FIELD 05****Deliverables**

- Bulk buyer/off-take contracts
- ESG-branded produce line
- Export facilitation
- Market & pricing advisory
- Realisation & impact reports

**FIELD 06****Activities & methodology**

- Aggregate — collect, grade and sort produce (individual or cluster).
- Brand & certify — packaging, branding and organic/GI certification facilitation.
- Sell — domestic channels (retail, HoReCa, e-commerce) and export facilitation (buyers, logistics, compliance).
- Report — price discovery, realisation and sales reporting.

**FIELD 07****Service level (SLA)**

Platinum + account team.

**FIELD 08****Roles & responsibilities**

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

**FIELD 09****Client inputs required**

Volumes, quality specs, ESG narrative, compliance data.

**FIELD 10****Technology / platforms**

Aggregation and traceability system; produce grading; e-commerce/D2C storefront; export-documentation and compliance tools; price-discovery data.

**FIELD 11****KPIs & success metrics**

Volume off-taken, realisation, % exported, premium, buyer retention.

**FIELD 12****Reporting & outputs**

Monthly sales + quarterly market review.

FIELD 13

Commercial model

Enterprise edition · advisory retainer + commission on sales.

FIELD 14

Indicative pricing (INR, ex-GST)

Advisory retainer: ₹2–10 lakh/yr + commission 6–10% of sales. Export facilitation: project-based.

FIELD 15

Timeline & milestones

Onboarding and branding 3–6 weeks; sales from the first harvest cycle; export facilitation project-based.

FIELD 16

Quality assurance

Grading and quality standards; traceability; buyer-contract management; realisation benchmarked vs mandi prices.

FIELD 17

ESG & sustainability outcomes

ESG/carbon-linked produce positioning; traceability.

FIELD 18

Optional add-ons

Carbon-inset produce, export certifications, private-label programmes.

FIELD 19

Risks & exclusions

Excludes price guarantees; realisation depends on quality, volume and market conditions; export subject to buyer and regulatory acceptance.

FIELD 20

Compliance & legal

Food-safety, labelling, organic/GI and export/FSSAI/APEDA norms; contract and payment terms. GST extra.

FIELD 21

Support & escalation

Linkage/account manager; documented change requests; escalation matrix; monthly sales review.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Market Linkage Facilitation

P3 / 5

Client profile P3 · FPOs / Village-level Organisations (aggregated member farms)

“Aggregate, brand, certify and sell the produce — domestic and export — capturing premium realisation for the grower.”

**FIELD 01****Purpose & value proposition**

Market Linkage Facilitation ensures the value created on the farm reaches the grower's pocket. It aggregates, grades, brands and sells produce through the right channels — local, retail, e-commerce and export — and facilitates certification, buyers, logistics and compliance, so growers realise premium prices rather than losing value to intermediaries.

**FIELD 02****Target profile & eligibility**

Registered Farmer Producer Organisations or village-level organisations aggregating multiple small and marginal member farms into a cluster.

**FIELD 03****Objectives (this profile)**

Aggregate member produce and open premium domestic and export markets with certification.

**FIELD 04****Scope (included / excluded)**

Included: aggregation, branding, certification, domestic & export linkage, price discovery.

Excluded: individual guarantees.

**FIELD 05****Deliverables**

- Aggregation & grading
- Collective brand & packaging
- Certification (organic/GI)
- Domestic & export buyer linkage
- Realisation reports

**FIELD 06****Activities & methodology**

- Aggregate — collect, grade and sort produce (individual or cluster).
- Brand & certify — packaging, branding and organic/GI certification facilitation.
- Sell — domestic channels (retail, HoReCa, e-commerce) and export facilitation (buyers, logistics, compliance).
- Report — price discovery, realisation and sales reporting.

**FIELD 07****Service level (SLA)**

Gold (cluster).

**FIELD 08****Roles & responsibilities**

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

**FIELD 09****Client inputs required**

Aggregation infra, member volumes, FPO registration.

**FIELD 10****Technology / platforms**

Aggregation and traceability system; produce grading; e-commerce/D2C storefront; export-documentation and compliance tools; price-discovery data.

**FIELD 11****KPIs & success metrics**

Volume aggregated, realisation vs mandi, % exported, member income.

**FIELD 12****Reporting & outputs**

Monthly aggregation & sales report.

FIELD 13

Commercial model

Enterprise (Cluster) edition · membership fee + commission (blended-supported).

FIELD 14

Indicative pricing (INR, ex-GST)

Membership/aggregation: ₹50,000–2,00,000/FPO/yr + commission 6–10%. Certification/export: grant/CSR-supported.

FIELD 15

Timeline & milestones

Onboarding and branding 3–6 weeks; sales from the first harvest cycle; export facilitation project-based.

FIELD 16

Quality assurance

Grading and quality standards; traceability; buyer-contract management; realisation benchmarked vs mandi prices.

FIELD 17

ESG & sustainability outcomes

Inclusive value capture, smallholder market access.

FIELD 18

Optional add-ons

Warehousing, processing, export desk, carbon aggregation.

FIELD 19

Risks & exclusions

Excludes price guarantees; realisation depends on quality, volume and market conditions; export subject to buyer and regulatory acceptance.

FIELD 20

Compliance & legal

Food-safety, labelling, organic/GI and export/FSSAI/APEDA norms; contract and payment terms. GST extra.

FIELD 21

Support & escalation

Linkage/account manager; documented change requests; escalation matrix; monthly sales review.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Market Linkage Facilitation

Client profile P4 · Small Landholders (5–20 acres)

P4 / 5

“Aggregate, brand, certify and sell the produce — domestic and export — capturing premium realisation for the grower.”

**FIELD 01****Purpose & value proposition**

Market Linkage Facilitation ensures the value created on the farm reaches the grower's pocket. It aggregates, grades, brands and sells produce through the right channels — local, retail, e-commerce and export — and facilitates certification, buyers, logistics and compliance, so growers realise premium prices rather than losing value to intermediaries.

**FIELD 02****Target profile & eligibility**

Individual small landholders with 5–20 acres seeking an affordable, full-service conversion to natural farming with dependable management and market linkage.

**FIELD 03****Objectives (this profile)**

Reliable branded market linkage that beats mandi realisation.

**FIELD 04****Scope (included / excluded)**

Included: aggregation, branding, domestic sales, certification facilitation.

Excluded: price guarantees.

**FIELD 05****Deliverables**

- Aggregation & grading
- Branded packaging
- Domestic channel sales
- Realisation reports

**FIELD 06****Activities & methodology**

- Aggregate — collect, grade and sort produce (individual or cluster).
- Brand & certify — packaging, branding and organic/GI certification facilitation.
- Sell — domestic channels (retail, HoReCa, e-commerce) and export facilitation (buyers, logistics, compliance).
- Report — price discovery, realisation and sales reporting.

**FIELD 07****Service level (SLA)**

Gold.

**FIELD 08****Roles & responsibilities**

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.

**FIELD 09****Client inputs required**

Produce volumes/quality.

**FIELD 10****Technology / platforms**

Aggregation and traceability system; produce grading; e-commerce/D2C storefront; export-documentation and compliance tools; price-discovery data.

**FIELD 11****KPIs & success metrics**

Realisation, volume sold, repeat buyers.

**FIELD 12****Reporting & outputs**

Monthly sales report.

FIELD 13

Commercial model

Professional edition · commission on sales.

FIELD 14

Indicative pricing (INR, ex-GST)

Commission: 8–12% of realised sales. Optional certification facilitation: ₹50,000–1,50,000.

FIELD 15

Timeline & milestones

Onboarding and branding 3–6 weeks; sales from the first harvest cycle; export facilitation project-based.

FIELD 16

Quality assurance

Grading and quality standards; traceability; buyer-contract management; realisation benchmarked vs mandi prices.

FIELD 17

ESG & sustainability outcomes

Chemical-free traceable produce.

FIELD 18

Optional add-ons

Export, certification, e-commerce.

FIELD 19

Risks & exclusions

Excludes price guarantees; realisation depends on quality, volume and market conditions; export subject to buyer and regulatory acceptance.

FIELD 20

Compliance & legal

Food-safety, labelling, organic/GI and export/FSSAI/APEDA norms; contract and payment terms. GST extra.

Support & escalation

Linkage/account manager; documented change requests; escalation matrix; monthly sales review.

Indicative pricing is for 2026, exclusive of GST, and is firmed up per site in a written proposal after survey. This specification is a companion to the Managed Farmland Service — Service Specifications & Pricing (Master Document).

Market Linkage Facilitation

Client profile P5 · Small & Marginal Holders (< 5 acres)

P5 / 5

“Aggregate, brand, certify and sell the produce — domestic and export — capturing premium realisation for the grower.”

**FIELD 01****Purpose & value proposition**

Market Linkage Facilitation ensures the value created on the farm reaches the grower's pocket. It aggregates, grades, brands and sells produce through the right channels — local, retail, e-commerce and export — and facilitates certification, buyers, logistics and compliance, so growers realise premium prices rather than losing value to intermediaries.

**FIELD 02****Target profile & eligibility**

Small and marginal farmers with under 5 acres, served through group / FPO aggregation and blended finance.

**FIELD 03****Objectives (this profile)**

Access to markets through group aggregation, with minimal fixed cost.

**FIELD 04****Scope (included / excluded)**

Included: group aggregation, collective sale, basic branding.

Excluded: individual export/branding.

**FIELD 05****Deliverables**

- Group aggregation & grading
- Collective sale
- Basic branded packaging

**FIELD 06****Activities & methodology**

- Aggregate — collect, grade and sort produce (individual or cluster).
- Brand & certify — packaging, branding and organic/GI certification facilitation.
- Sell — domestic channels (retail, HoReCa, e-commerce) and export facilitation (buyers, logistics, compliance).
- Report — price discovery, realisation and sales reporting.

**FIELD 07****Service level (SLA)**

Silver.

**FIELD 08****Roles & responsibilities**

Gratitude Farms: delivery, supervision, technology, reporting and QA per this specification.

Client: provide inputs listed below, approvals, timely decisions and agreed payments.
